Be financially prepared for uncertainties

Build an Emergency Fund

[Join BeingLXME](#)

Emergencies don't come knocking on your door like good neighbours do. They show up unannounced and many times they catch you off guard. The reality is that you can't always be mentally prepared for uncertainties, but you sure can be financially equipped to deal with them. This is where an **Emergency Fund** comes in handy.

What is an Emergency Fund?
It's self-explanatory. It's money you set aside to use for a rainy day or in other words, emergencies. This shouldn't be confused with regular savings. This fund should be used only during an emergency!

How to create an Emergency Fund?

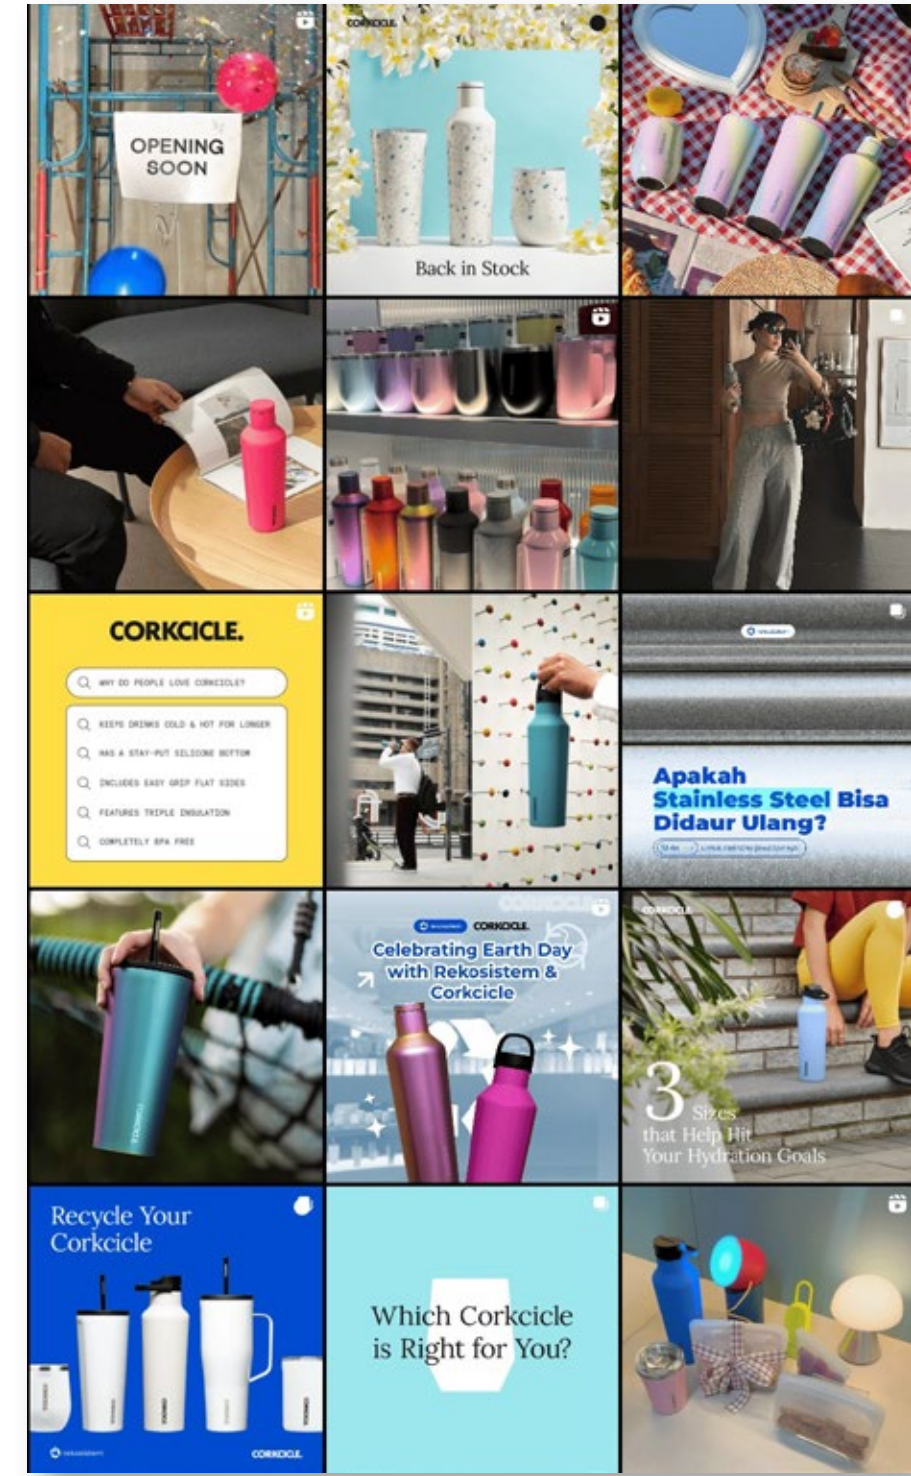

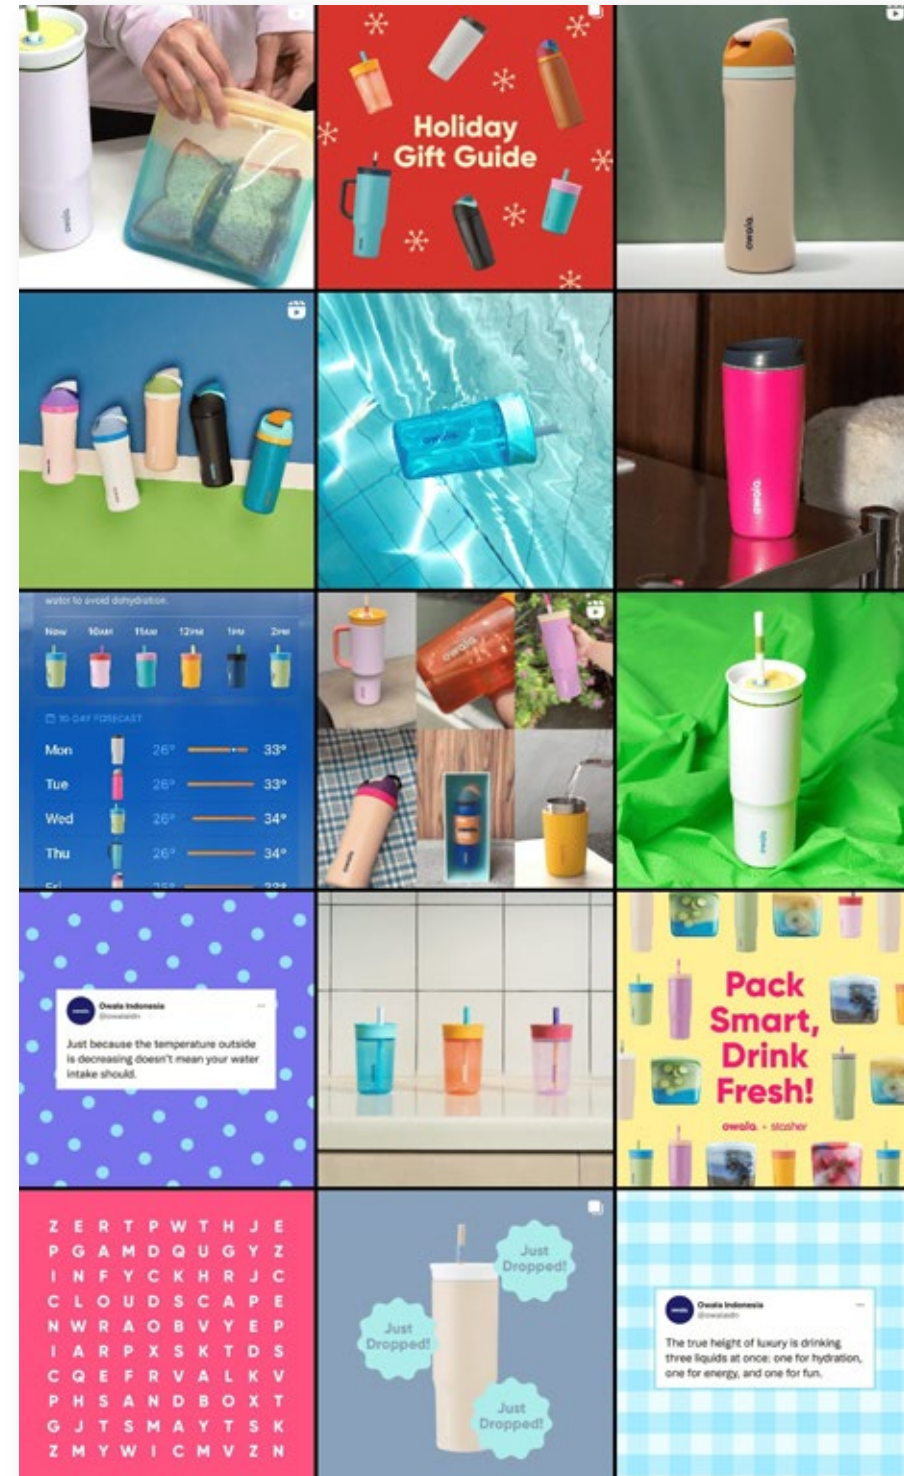

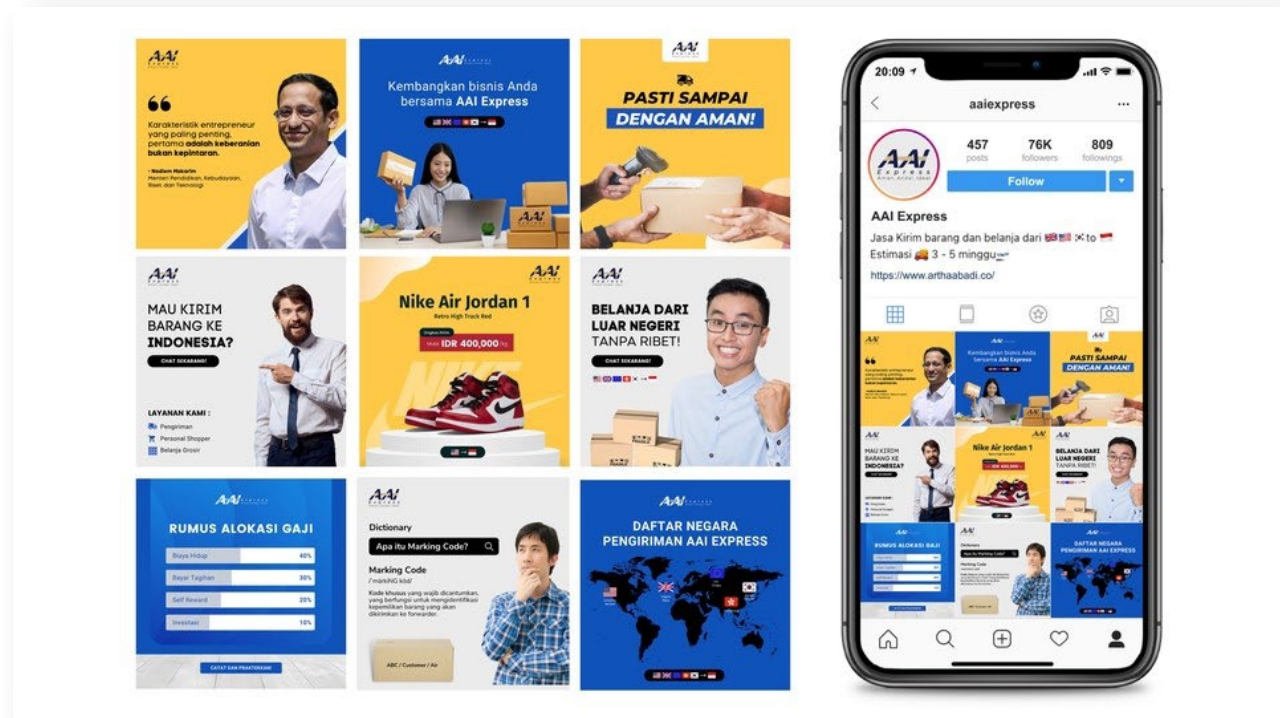

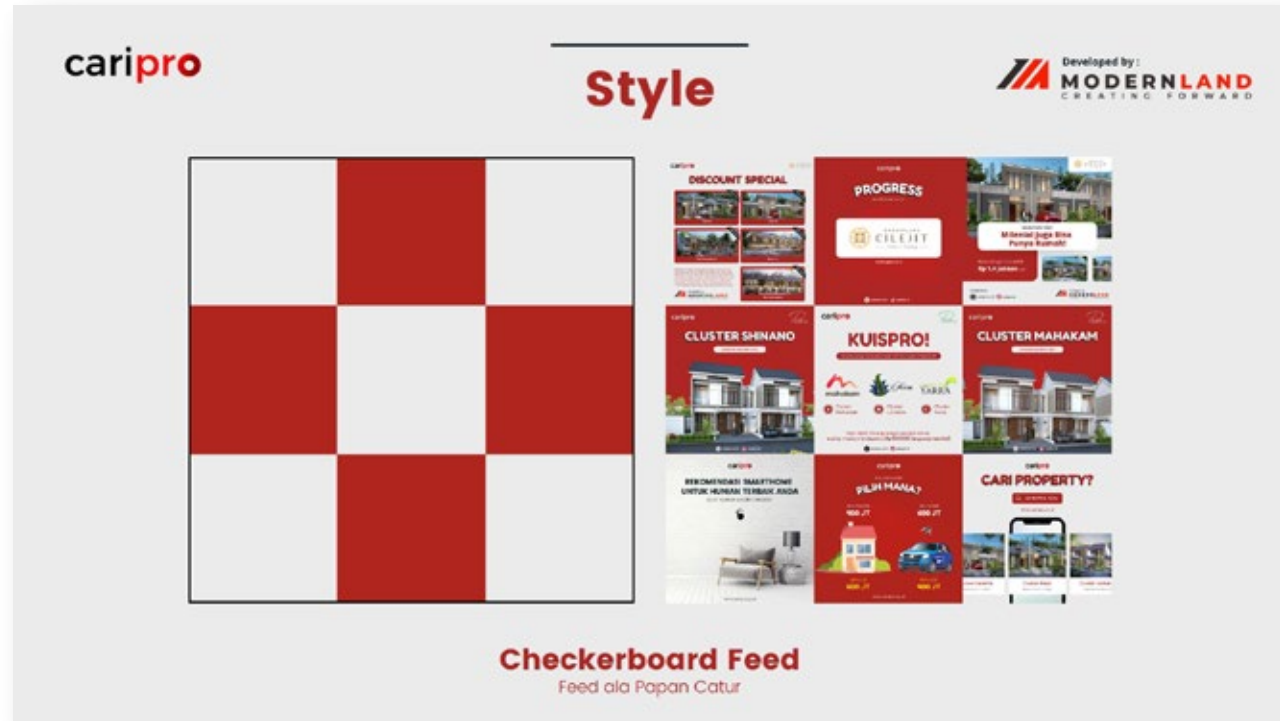

- Save **6-8 months** of your monthly expenses for uncertainties
- If you don't have a fixed income, then you should consider **building a larger emergency fund**
- Either set aside the money, or invest it in instruments that allow the money to grow and that which can be **easily liquidated**
- Avoid using this fund** as you would with your regular savings.
- Prioritise** building an emergency fund over wealth creation
- Review your investing options** annually to be in sync with your income & expenses

Want to learn How to choose investment options to build an emergency fund? [Read this blog post.](#)

If you're not actively discussing money, then it's high time you should get on the LXME App & start a money conversation.

Storyboard

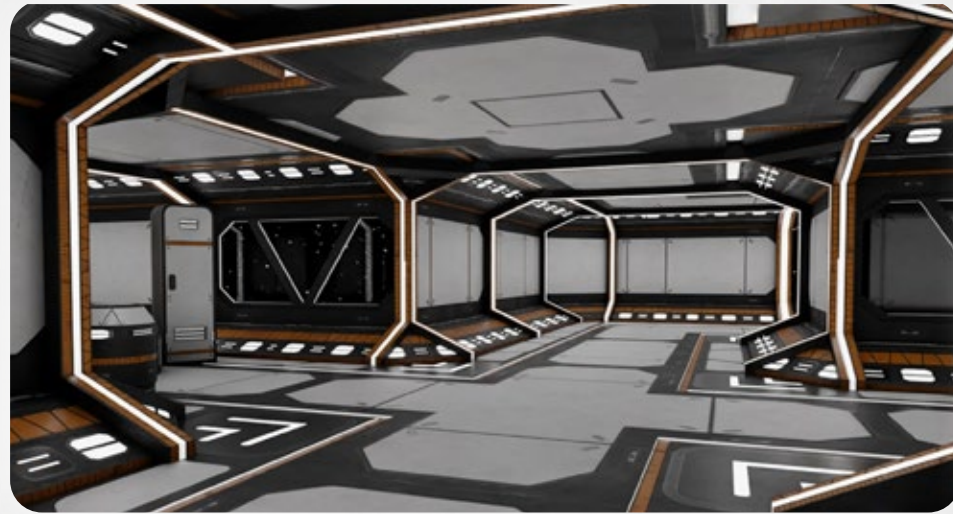

<p>VO: ENBREL Open on ENBREL logo w/sonic branding.</p>	<p>The logo turns around and abstract 3D shapes (spheres, cylinders...) appear from its back moving along the rotation.</p>	<p>We see a female human body in the center of a stage</p>	<p>The camera rotates arriving in front of the stage.</p>
<p>VO: Your immune system ... TITLE CARD: Inflammation & the Immune System A dome starts to take shape around her.</p>	<p>VO: ...protects your body from infection and disease. We zoom into the woman. Floating particles hit the dome and bounce back, showing that the dome works as a protection representing the immune system.</p>	<p>Camera zooms in approaching the left hand of the body.</p>	<p>The camera travels past the dome that disappears facing out. We now focus on a finger with a minimal 2D graphic that briefly leads viewers attention</p>
