wewe.cc

Introduction

WeWe is a project management service provider specializing in **end-to-end delivery for WHMCS-based systems**. Our team has extensive hands-on experience managing WHMCS implementations, enhancements, upgrades, and operational workflows.

As a **sister company of WebNIC**, a well-established industry player with over a decade of experience, we are backed by strong technical resources and a reliable support ecosystem. If you require assistance with **WHMCS development, optimization, or upgrades**, we'd be glad to support your project.

Project Portfolio

This portfolio presents selected **WHMCS development projects** handled by our team. Due to **the NDA**, client identities cannot be revealed.

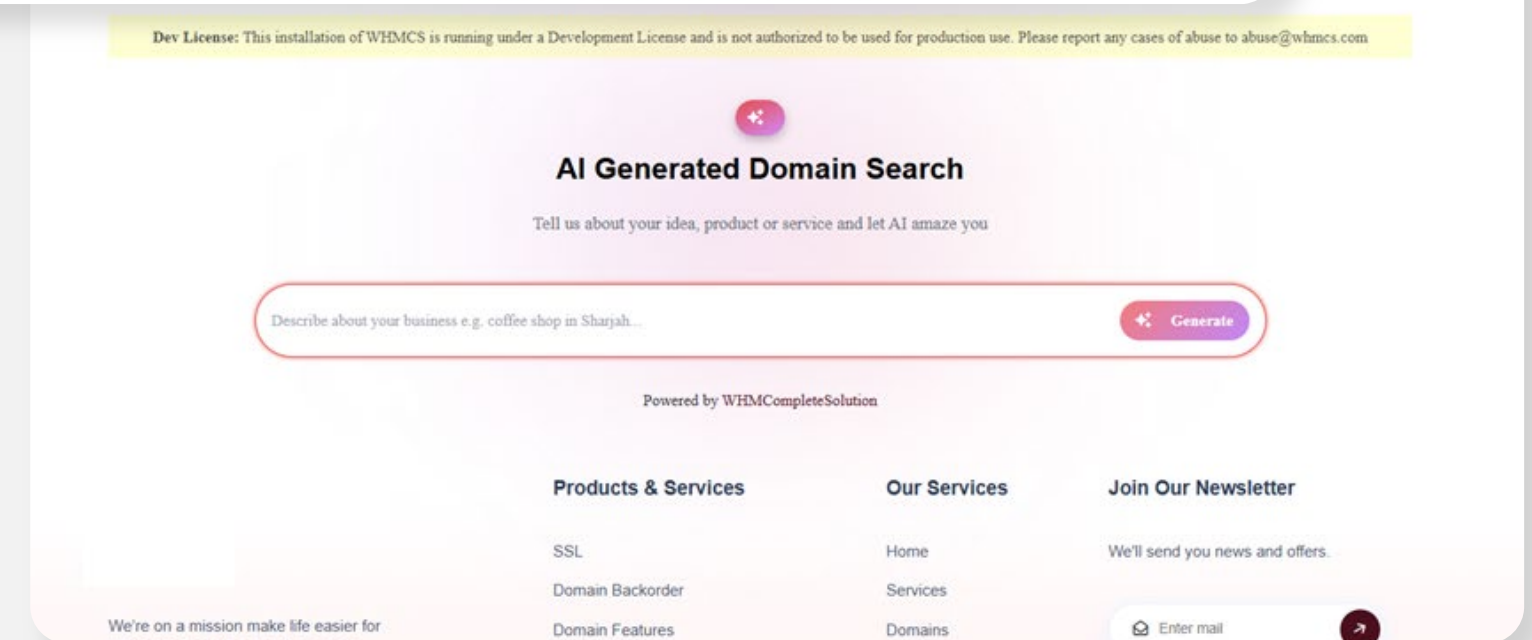

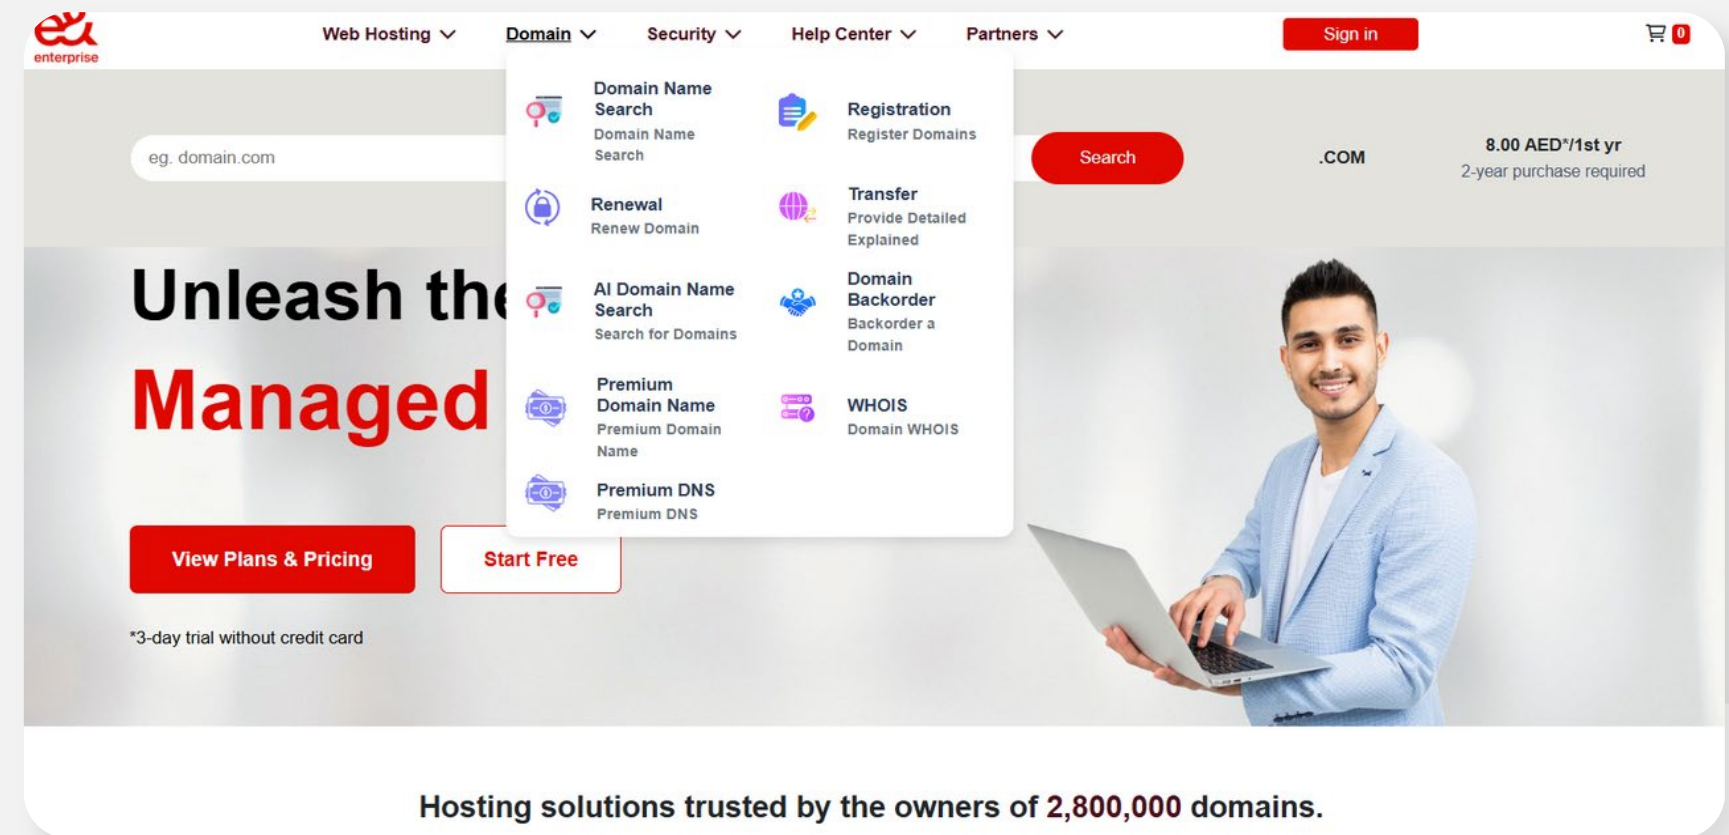

As such, we only display **public-facing interfaces**, along with descriptions of the **custom modules, configurations, and system customizations** implemented.

UAE Project

We supported a UAE-based client across **multiple WHMCS development and enhancement initiatives**, covering custom module development, system optimization, and ongoing maintenance.

The scope included **payment gateway and registrar module integrations, custom add-ons, service provisioning logic, and workflow automation**, along with **frontend/UI customization** and **Matomo Analytics** integration for tracking and reporting.

All work was delivered using **PHP, MySQL, and WHMCS** best practices, ensuring scalable, reliable billing and automation workflows to support the client's growing infrastructure.

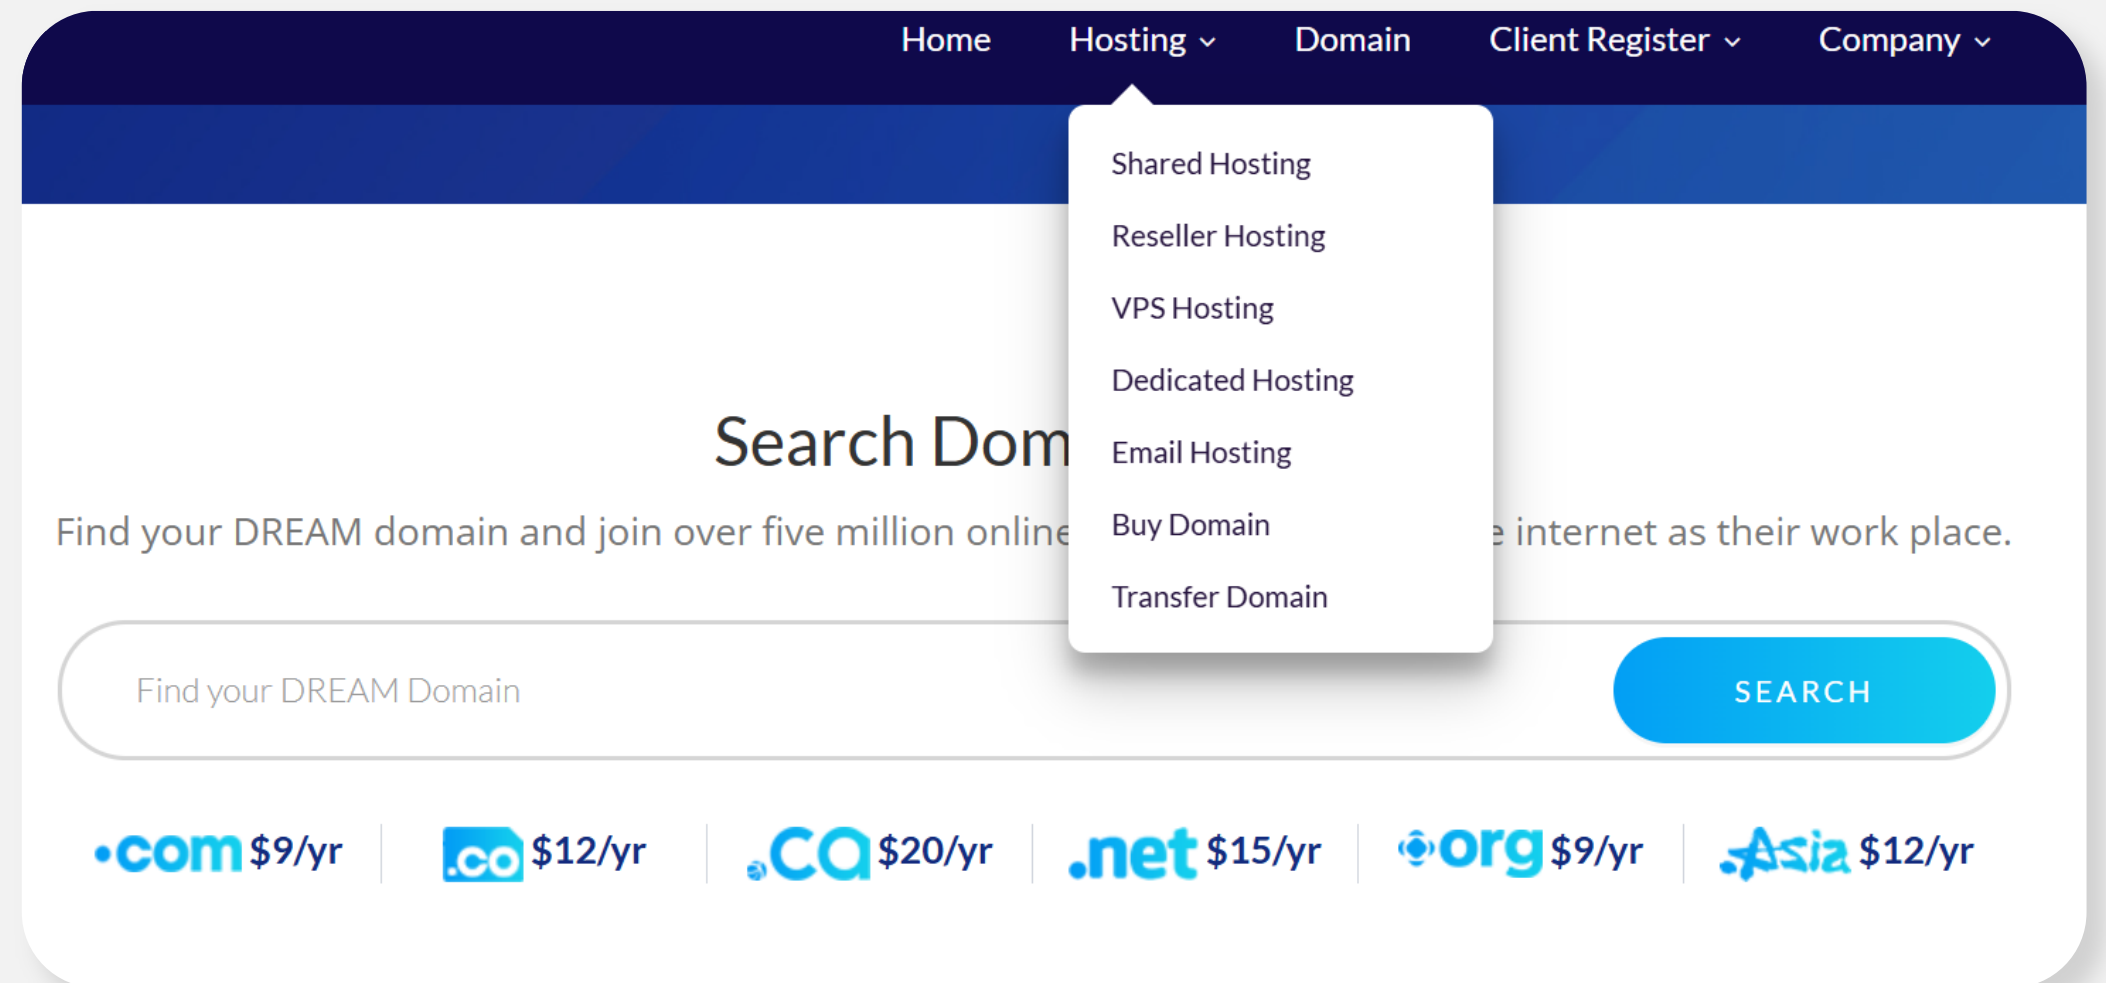

This project focuses on developing a comprehensive **hosting and domain services website from scratch**, covering both hosting offerings and full domain lifecycle management.

The scope includes building shared, reseller, VPS, dedicated, and email hosting pages, along with domain search, registration, transfer, and management flows, an integrated shopping cart and checkout experience, and a client account dashboard.

The talent is responsible for the complete **end-to-end build**, from **system architecture** and **UI/UX through backend implementation and service integrations**, delivering a fully functional, scalable, and the platform ready for commercial use.

US Project

Singapore Project

This project focuses on delivering a **customized WHMCS implementation** with **tailored automation and system integrations** while maintaining client confidentiality on specific configurations. The scope includes **developing add-on modules** to automate operational tasks, a **registrar module** to integrate with domain management systems, **payment gateway modules** to support local and global transactions, and **provisioning modules** to handle product setup and service activation.

In addition, the work covers **WHMCS theme customization**, revamping key client-area interfaces such as **login pages, order forms, and shopping carts** to align with brand identity and enhance overall user experience, resulting in a fully integrated and production-ready solution.

Indonesia Project

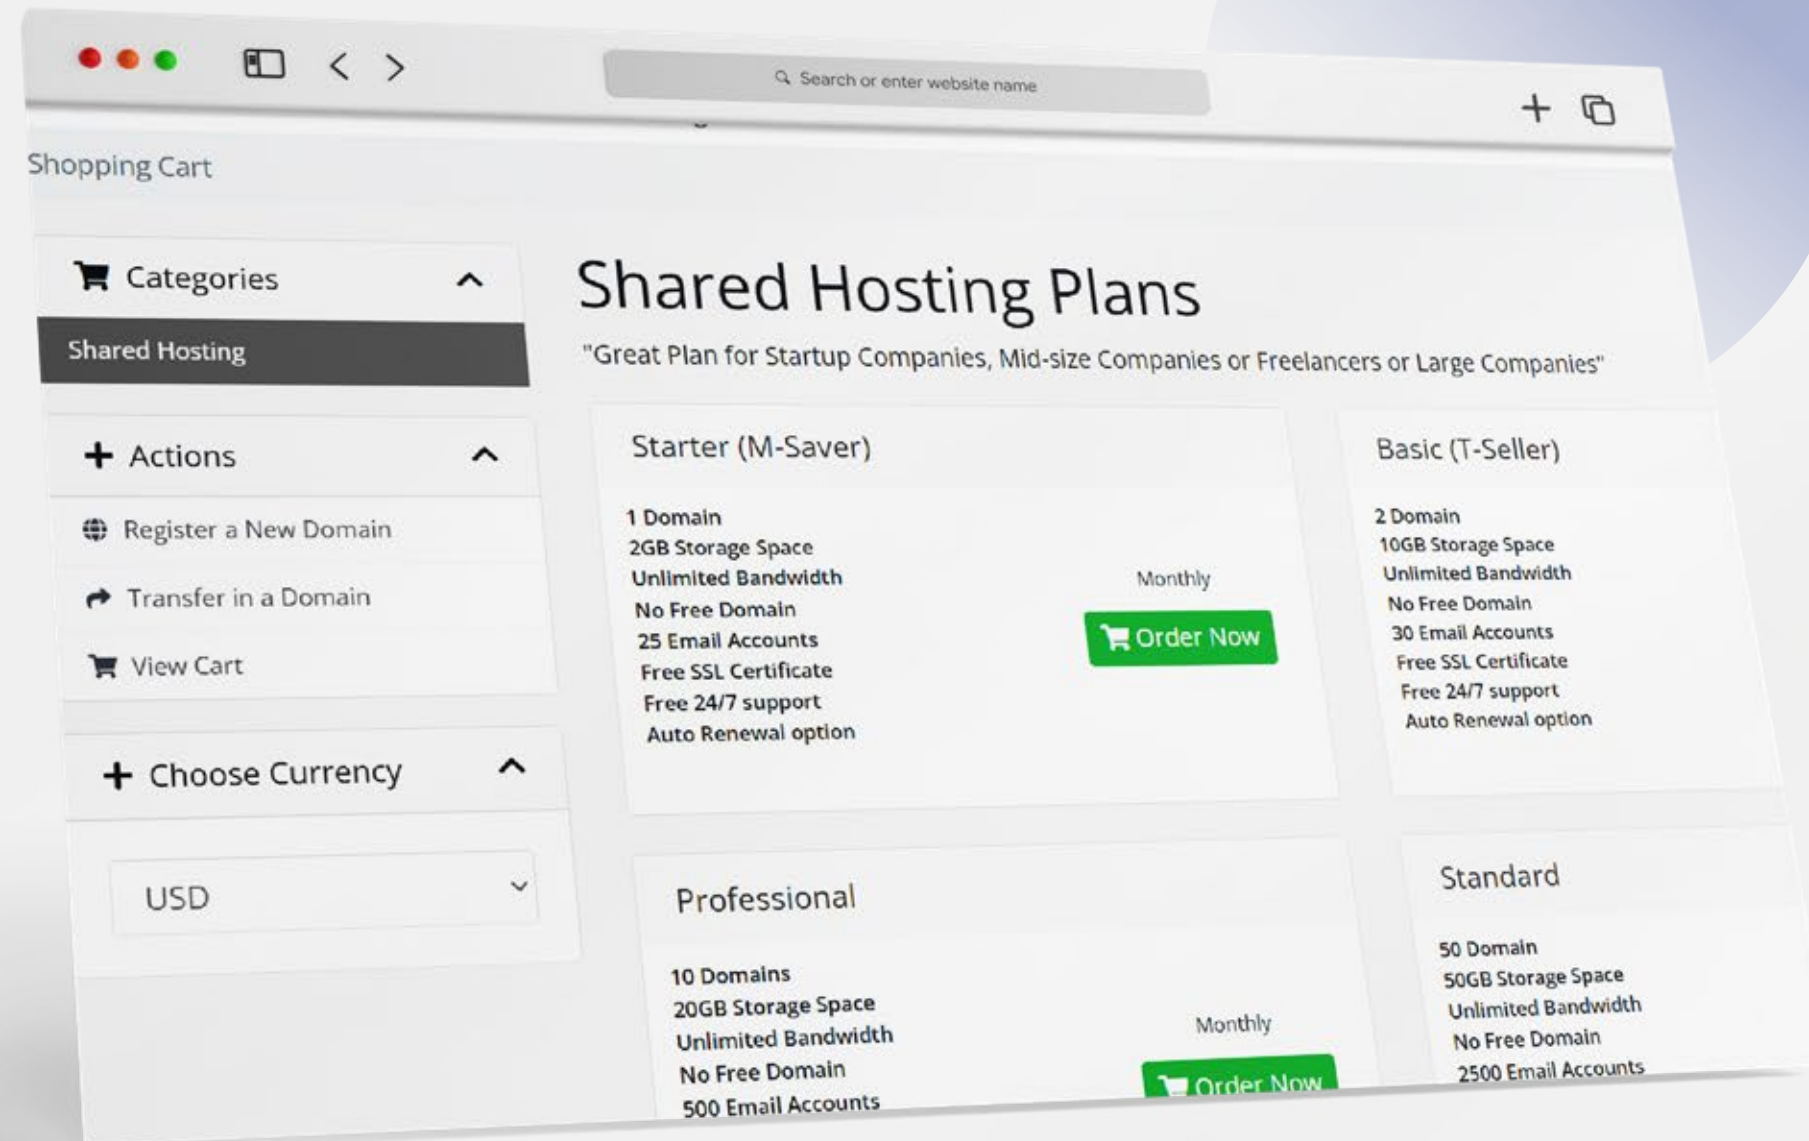

These projects center on developing **custom WHMCS modules and integrations** with a strong emphasis on **backend systems and operational workflows**. The scope includes **API development, backend endpoint and database handling, and the creation of custom WHMCS add-ons** such as **coupon and cashback functionality** based on internal specifications.

It also covers **payment gateway integration**, including Xendit with secure callback processing, **along with integrations for Office 365, SSL services, and registrar operations**. In parallel, **frontend work** was delivered through a **custom client panel built with Vue.js** and tightly **integrated with WHMCS** to support orders, billing, and account management in a stable, fully integrated environment.

India Project

This project focuses on developing a **full-featured web hosting platform from scratch**, covering all essential hosting and domain-related functionalities. The scope includes end-to-end setup of **shared hosting plans, domain registration and transfer flows, domain management, a complete shopping cart and checkout experience, client account dashboard, automated service provisioning, billing and invoicing, SSL and email configuration, and basic support access.**

The talent is responsible for the entire build from initial **system design and UI/UX** through **backend implementation and integrations**, delivering a fully operational, scalable, and production-ready platform.
